

"When we heal the Earth, we heal ourselves."

—David Orr

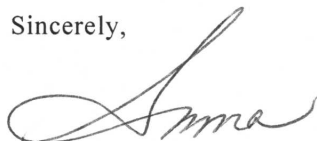

Dear Friend,

Around the globe, energy conservation continues to be a popular topic, and more tools are being developed daily to help you win. Newer technology such as fluorescent bulbs, which require less wattage, and energy-efficient appliances will save you money over time and help you do your part in curbing climate change.

For this month's Item of Value, I have provided you with a guide to conserve energy around the house. Many of these tips won't cost you anything, and all of them will cut down on your gas and electricity bills. On the back side, you will find the best way to reinvest the money you're saving on your energy bill to create even more savings.

I am here to help you out when it comes to helping out the environment. Now "Going Green" will help you save some green.

Sincerely,

Anna Babineaux

Your Personal Mortgage Consultant For Life

Oh, by the way®...if you know of someone who would appreciate the level of service I provide, please call me with their name and telephone number, and I'll be happy to follow up and take great care of them.- 713-907-5365
